LinkedIn: Xiao Wang

My current research focuses on Agentic AI, with an emphasis on developing more effective and efficient ways to harness large language models as reliable, production-ready tools. In addition, I have research interests and experience in several other AI areas, including reinforcement learning, LLM post-training, and generative model, where I have also made research contributions.

Education

University at Buffalo, SUNY |Department of Computer Science and Engineering 2024 – Present
Ph.D. Student in Computer Science *GPA: 4.00* *Advisor: Prof. Venu Govindaraju*

Syracuse University |College of Engineering & Computer Science 2021 – 2023
M.S. in Computer Science *GPA: 3.86*

Publications

- **Xiao Wang***, Lu Dong*, Sahana Rangasrinivasan, Ifeoma Nwogu, Srirangaraj Setlur, Venu Govindaraju. "AutoMisty: A Multi-Agent LLM Framework for Automated Code Generation in the Misty Social Robot." *International Conference on Intelligent Robots and Systems (IROS 2025 Oral).*
- **Xiao Wang***, Lu Dong*, Ifeoma Nwogu, Srirangaraj Setlur, Venu Govindaraju. "InterventionLens: A Multi-Agent Framework for Detecting ASD Intervention Strategies in Parent-Child Shared Reading." *Proceedings of the IEEE/CVF Conference on Computer Vision and Pattern Recognition (CVPRW 2026).*

Professional Experience

ByteDance / TikTok **May 2026 — Aug 2026**
Research Scientist Intern, Applied Machine Learning – Enterprise *San Jose, CA*
- Conducting research on LLM-based agentic AI systems for enterprise applications.

Microsoft **May 2025 — Aug 2025**
PhD Research Intern, MSAI Reasoning & Language Understanding (M365 Copilot Researcher) *USA*
- Collaborated on the design and implementation of a four-stage, multi-agent meeting simulation pipeline (*Scene Planning – Character Modeling – Directed Interaction – Post-production*), replacing one-shot script generation with iterative, collaborative agent workflows.
- Coordinated agents with distinct personas and specialized knowledge bases to produce realistic dialogues averaging 40–60 minutes and over 150 turns, overcoming the “short, flat, fake” limitations of conventional scripted meetings.
- Built an automated fact-evaluation framework to assess the accuracy of key discussion points and detect significant factual deviations.
- Integrated fact-evaluation results as feedback signals into the generation pipeline, enabling automatic quality optimization.
- Delivered hundreds of high-fidelity meeting transcripts, now serving as synthetic training data for multiple internal initiatives.
