

My current research focuses on Agentic AI, with an emphasis on developing more effective and efficient ways to harness large language models as reliable, production-ready tools. In addition, I have research interests and experience in several other AI areas, including reinforcement learning, LLM post-training, and generative model, where I have also made research contributions.

EDUCATION

University at Buffalo, SUNY Department of Computer Science and Engineering	2024 – Present
Ph.D. Student in Computer Science GPA: 4.00 Advisor: Prof. Venu Govindaraju	
Syracuse University College of Engineering & Computer Science	2021 – 2023
M.S. in Computer Science GPA: 3.86	

PUBLICATIONS

PROFESSIONAL EXPERIENCE

ByteDance / TikTok	May 2026 — Aug 2026
Research Scientist Intern, Applied Machine Learning – Enterprise (Evolve Agent)	San Jose, CA
• Co-designed a self-evolving agent based on genetic evolution: signals mined from user–system interaction logs are abstracted into “genes”, which are then rendered into multiple expressions (prompts, Skills, agent harnesses), enabling the system to evolve continuously from real interaction feedback without updating model parameters. • Developed SkillAtom, a graph-based representation that decomposes natural-language Skills into traceable components for diagnosis and modification. • Developed Atomed Skill Evolve, which automatically optimizes Skills from strong–weak model execution traces; improved Haiku 4.5 task success from 14.1% to 45.3% across 64 tasks without changing model parameters.	
Microsoft (via Centific Global Solutions, Inc.)	May 2025 — Aug 2025
PhD Research Intern, MSAI Reasoning & Language Understanding (M365 Copilot Researcher)	USA
• Developed a four-stage multi-agent meeting simulation pipeline spanning scene planning, character modeling, directed interaction, and post-production. • Built automated fact-evaluation and feedback mechanisms to detect factual deviations and improve generation quality. • Generated hundreds of high-fidelity synthetic meeting transcripts, typically 40–60 minutes and 150+ turns, for downstream internal training and research.
